

## **PROPRESS DRAPERY KIT**

The Drapery Kit is designed for steaming high drop curtains up to 3.3 Metres without the use of a ladder. However when steaming areas of a curtain, wall covering or marquee below 2 metres, the standard 2 metre Drapers hose should be used. If you use the longer 3 metre hose at low levels this will result in a large amount of condensation forming in the hose and steam escaping from the filler cap.

### **Getting Started**

Assemble the Drapery Kit pole set with handle grip at the bottom and hook at the top.

When machine is cold, attach the Drapery Kit hose to your Propress steamer and place nozzle into top hook of pole set attached to the steamer. Fill steamer with water as normal, following the filling instructions supplied with the machine. Connect power supply, switch machine on and wait for steam to appear.

Once steaming, the nozzle can be placed in the hook on the Drapery Kit pole set. When steaming, keep hose running parallel with the pole set and ensure that the nozzle is always horizontal. If the nozzle is allowed to swivel in the hook water droplets can be emitted.

Run nozzle up and down the top of curtains to remove creases. It may be necessary to periodically lift the hose to allow any condensation that has formed in the hose to run back into the machine.

Once you have steamed the top section of the curtains down to a level of approximately 2 Metres from the floor, the steamer should be switched off and allowed to cool. When the steamer is cold the 3 Metre Drapery Kit hose can be removed and the standard 2 metre Drapers hose fitted, the bottom section of the curtains can then be steamed.

**Note:** *when hoses are warm they are much more flexible, take care if storing your steamer with a warm hose, particularly if you are packing it in a Propress carrying case. If the hose is kinked when warm it can permanently damage it.*

**Caution** the steam hose can get very hot during operation; where necessary protective clothing should be worn.

We recommend the Propress carrying case for transportation and storage of your Propress steamer and accessories. For further details call 027 434 1433.
