

Propress Fabric Steamers are incredibly effective when it comes to presenting, refreshing and revitalising virtually any fabrics.

They generate a constant flow of hot, dense steam, and this is a great advantage when it comes to heavy fabrics, tough folds and creases. The centrally heated boiler provides steam that is fully effective and leaves fabrics hanging perfectly, without a sheen, breathing life back into the fabric. The Propress non-spit nozzle provides peace of mind for use with lighter-coloured fabrics, and worries over expensive stains.

Steam will refresh curtains and remove creases. It is even suitable to use on thermal backs and fabric blinds. It will sanitise your mattress and sofa, kill bedbugs and their eggs, viruses, bacteria, allergens, mould and mildew and remove dents and creases in carpets. It is an ideal tool to assist with a quick refresh of rest home rooms between occupancies. Steam is especially good for clothing and apparel.

Our versatile Fabric Steamers are used everywhere from rest homes and hospitals, to laundries and hotels, antique and contemporary furniture makers, apparel manufacturers, retailers to luxury yachts, caravans and motor cars, and by curtain-makers, photography studios, carpet fitters, upholsterers, auto trimmers and wig makers. The machine's stability and its hose's flexibility and performance allow it to be used in the workroom, the drying room, the showroom, and in situ at specific locations, taking care of the inevitable problems arising with handling fabrics.

Steam vapor penetrates surfaces, destroys mould spores, germs, viruses, dust mites, and bacteria (no chemicals needed). Prevent mould and mildew from building up on shower curtains or shower doors. Just pass the steam over the surface of the curtain or door, then wipe any loosened mildew or soap scum.

Propress Garment Steamers are suitable for all types of clothing, from fashion and bridal through to vintage, and are safe for use on velvets, silk, linen, wool, cashmere, appliqués, embroidery and even lingerie. Propress steamers are recommended for use by the U K National Trust to treat centuries old fragile vintage fabrics. The steamer's speed of performance gets garments where they are needed right away – on display or back in the residents' wardrobes. Many costumiers, theatre and film studio wardrobe departments, as well as celebs constantly in the public eye, have the perfect solution – a Propress Steamer.
